

MEMO: Ad Campaign Performance

Conversion Rate Comparison | Prepared for: Marketing Leadership

Business Question

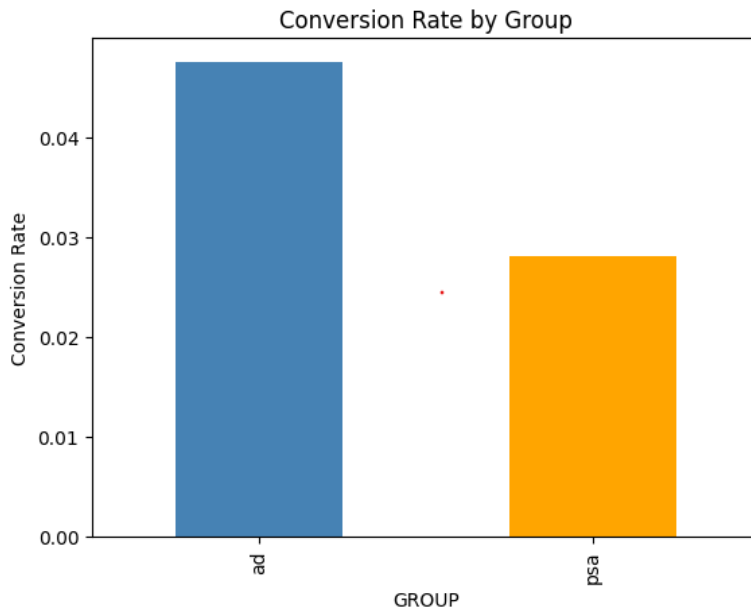

Does showing users an ad, instead of a public service announcement (PSA), change their likelihood of converting?

Key Result

GROUP	CONVERSION RATE
Ad	2.56%
PSA	1.79%

The ad group converted at a rate 0.77 percentage points higher than the PSA group (95% CI: 0.60-0.94 percentage points). This difference is highly statistically significant (chi-square = 54.01, $p < 0.001$), meaning it is extremely unlikely to be due to random chance.

Chart: Conversion Rate by Group

Recommendation

Roll out the ad campaign. It reliably drove more conversions than the PSA, and the result is backed by strong statistical evidence.

Caveats

This analysis is based on conversion rate only and does not account for ad spend or cost-efficiency.

A follow-up cost/ROAS (return on ad spend) analysis is recommended before finalizing the budget decisions.
